

Migrating Off the Mainframe

Are you planning to move off the mainframe? Are your legacy applications running on an unsupported operating system or database? Blue Hill offers practical data center outsourcing solutions to help alleviate this burden, as well as the third party software costs that go along with it.

You can outsource what is left of your mainframe environment to us for as long as needed while you concentrate on your core business or migrate off the mainframe. Blue Hill can provide a permanent solution or one with decreasing resources. We will manage your legacy platforms for you while you focus on moving to a new platform to help expedite your migration to an open systems environment.

Blue Hill's goal is to provide our clients the most cost-effective and technically feasible means of managing their IT system. Blue Hill offers flexible and secure solutions to run your mainframe platform, consolidate, upgrade, re-platform, or relocate your legacy workload smoothly and reliably while bringing you the cost savings you need.

With Blue Hill's expertise and state-of-the-art data center infrastructure, we are fully equipped to run your operating environment. Our viable solutions allow you to outsource your legacy system to us and refocus on where you are going. Blue Hill adds value in support of your new business requirements as you move forward.
